DEPARTMENT OF THE ARMY  
US Army Corps of Engineers  
Washington, DC 20314-1000

EM 1110-1-4010

Manual  
No. 1110-1-4010

1 June 1999

Engineering and Design  
MULTI-PHASE EXTRACTION

Table of Contents

<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
<b>CHAPTER 1 INTRODUCTION</b>		
Purpose	1-1	1-1
Applicability	1-2	1-1
References	1-3	1-1
Background	1-4	1-2
EM Scope	1-5	1-4
EM Organization	1-6	1-4
Resources	1-7	1-4
<b>CHAPTER 2 TECHNOLOGY DESCRIPTION AND UNDERLYING PHYSICAL PROCESSES</b>		
Introduction	2-1	2-1
Description of MPE Technologies and Application Strategies	2-2	2-1
General Concepts	2-3	2-4
Fundamentals of Multiphase Flow in Porous Media	2-4	2-12
Response of NAPL, Water, and Air to Vacuum	2-5	2-26
Fate Mechanisms for NAPL in the Subsurface	2-6	2-37
<b>CHAPTER 3 SITE CHARACTERIZATION AND FEASIBILITY EVALUATIONS</b>		
Introduction	3-1	3-1
Data Collection Requirements for Technology Screening	3-2	3-1
Site Conditions	3-3	3-1
Physical Properties	3-4	3-5
Chemical/Contaminant Analyses	3-5	3-10
Evaluation of Biological Degradation Potential	3-6	3-31
Checklist of Site Characterization Data	3-7	3-33

<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
Remedial Technology Options	3-8	3-35
Feasibility Studies for MPE	3-9	3-47
<b>CHAPTER 4 PILOT-SCALE TESTS</b>		
Introduction	4-1	4-1
Pilot Testing Guidance	4-2	4-1
Field Criteria for Evaluating MPE Feasibility Based on a Pilot Test	4-3	4-26
<b>CHAPTER 5 DESIGN OF FULL-SCALE MPE SYSTEMS</b>		
Introduction	5-1	5-1
MPE Design Strategy	5-2	5-2
Design Guidance - Subsurface	5-3	5-5
Modeling	5-4	5-20
Multi-Phase Extraction System Well Construction and Specifications	5-5	5-28
Piping and Above-Ground Equipment	5-6	5-37
Instrumentation and Process Controls	5-7	5-60
Electrical Requirements	5-8	5-64
Waste Stream Treatment Options	5-9	5-68
Other System Appurtenances and Design Considerations	5-10	5-70
<b>CHAPTER 6 DESIGN DOCUMENTATION</b>		
Introduction	6-1	6-1
Drawings	6-3	6-1
Specifications	6-3	6-2
<b>CHAPTER 7 CONSTRUCTION, START-UP &amp; GENERAL OPERATIONS AND MAINTENANCE</b>		
Introduction	7-1	7-1
Construction Oversight	7-2	7-1
Collection of Baseline Data	7-3	7-1
Equipment Shakedown/Testing	7-4	7-5
System Start-Up	7-5	7-7
Operations, Maintenance and Monitoring	7-6	7-17

<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
<b>CHAPTER 8 SYSTEM SHUTDOWN AND CONFIRMATION OF CLEANUP</b>		
Introduction	8-1	8-1
Shutdown Strategy	8-2	8-1
Shutdown Guidance	8-3	8-4
<b>CHAPTER 9 OTHER ISSUES</b>		
Introduction	9-1	9-1
Legal and Regulatory	9-2	9-1
Patent Issues	9-3	9-1
Health and Safety	9-4	9-4
<b>APPENDIX A. REFERENCES</b>		
<b>APPENDIX B. INDEX</b>		
<b>APPENDIX C. GLOSSARY</b>		
<b>APPENDIX D. SYMBOLS</b>		

	<u>Subject</u>	<u>Page</u>
LIST OF TABLES		
TABLE	2-1 Free Product Recovery and Control Systems and Equipment	2-9
	2-2 Physical Properties of Selected Compounds	2-24
	2-3 Approximate Air Emergence Pressure and Effective Height of Capillary Fringe by Soil Textural Class	2-34
	3-1 Checklist of Site Characterization Data Needs for Technology Screening	3-4
	3-2 Soil Physical Parameters	3-6
	3-3 Ranges of Residual LNAPL Concentrations in the Unsaturated Zone	3-14
	3-4 LNAPL Physical and Compositional Analysis	3-16
	3-5 Pure Compound Solubilities at ~20°C for Selected Chlorinated Organic Solvents and Corresponding Maximum Concentration Limits (MCLs) for Drinking Water Set by USEPA	3-18
	3-6 Soil Sampling: Preservation Requirements/Recommended Analytical Methods	3-21
	3-7 Soil Gas Sampling/Analytical Methods	3-26
	3-8 Groundwater Sampling: Preservation Requirements/ Appropriate Analytical Methods	3-27
	3-9 Chemical Parameter/Purpose of Analysis	3-29
	3-10 Checklist of Site Characterization Data	3-34
	3-11 Advantages and Disadvantages of Conventional Liquid Hydrocarbon Recovery Systems	3-35
	3-12 LNAPL Pumping System Versus Recommended Operational Range	3-36
	4-1 Data Collection and Purpose of Collection During MPE Pilot Tests	4-13
	4-2 Overview of Example Sites	4-16
	4-3 Example Table (Fluid Data)	4-17
	4-4 Example Table (Air Data)	4-18
	4-5 Operating Conditions Data Summary for OU 18 Shallow Well Pilot Test	4-19
	4-6 MPE Pilot Test Site Conditions	4-27
	4-7 MPE Pilot Test Operating Conditions and Results	4-28
	4-8 Bioslurper Comparative Fuel Recovery Rates and Bioventing Feasibility Study	4-29
	5-1 Model Simulation of LNAPL Recovery by MPE: Parameters Common to Each Simulation	5-16
	5-2 Model Simulation of LNAPL Recovery by MPE: Parameters Varied	5-17

# LIST OF TABLES (Continued)

	<u>Subject</u>	<u>Page</u>
5-3	Multi-Phase Flow Models	5-21
5-4	Classification of Multi-phase Flow Models	5-24
5-5	Multi-Phase Model Classifications Applicable to Specific Remedial Scenarios	5-24
5-6	Physical Properties of Common MPE Piping Materials	5-38
5-7	NEMA Enclosure Classifications	5-65
5-8	Motor Enclosures & Typical Uses	5-66
5-9	Utilization Voltages	5-67
7-1	Checklist of Baseline Data to Consider Collecting	7-2
7-2	Example Pre-Commissioning/Shakedown Checklist	7-6
7-3	Suggested Sequence of Operations During Start-up	7-9
7-4	Suggested Checklist for Monitoring an MPE System	7-10
7-5	Suggested Operational Performance Checklist	7-15
7-6	Field Troubleshooting Guide	7-20
7-7	Operational Strategy Guide	7-22
7-8	Routine MPE Equipment Maintenance Activities	7-25
7-9	Checklist of Items to Consider for Long-Term Monitoring	7-25

# LIST OF FIGURES

Figure	2-1	Schematic of DPE System	2-2
	2-2	Schematic of a TPE System	2-2
	2-3	Bioslurper System	2-3
	2-4	Simplified Conceptual Model for LNAPL Release and Migration	2-4
	2-5	Distribution of Phases in the Subsurface	2-6
	2-6a	Conventional LNAPL Recovery Using Single-Pump System	2-7
	2-6b	Conventional LNAPL Recovery Using Two-Pump System	2-8
	2-7	Pneumatic Skimming Pump	2-8
	2-8	Schematic of Vacuum Effect on Perched Hydrocarbons	2-11
	2-9	Typical curves showing the relationship between capillary pressure and volumetric water content	2-16
	2-10	Capillary Pressure Head-Saturation Curves and Relative Air Permeability	2-17

LIST OF FIGURES (Continued)

	<u>Subject</u>	<u>Page</u>
2-11	a) The contact angle of a drop resting upon a plane solid surface; b) Hypothetical pore cross section with two fluids	2-25
2-12	MPE Flow Regimes	2-28
2-13	Air-Entry Pressure versus Air Emergence Pressure	2-30
2-14	Predicted Water Retention Curve and Data Points for a Silt Loam	2-31
2-15	Hypothetical scenarios that can prevail during MPE	2-33
2-16	Preferential Airflow into MPE Well from a Layered Soil	2-36
2-17	Relative Oil Mobility Versus Apparent Oil Thickness for Two Soils	2-38
3-1a	Technology Screening Matrix - Vacuum-Enhanced LNAPL (Free Product) Recovery	3-2
3-1b	Technology Screening Matrix - Vacuum-Enhanced SVE/BV	3-3
3-2	Relative vertical distribution of apparent LNAPL thickness, $H_o$ , in a monitoring well versus true LNAPL thickness, $V_o$ , at equilibrium	3-12
3-3	Results from Controlled Spill Experiments	3-19
3-4	Various conditions under which DNAPL may accumulate and be identifiable in a monitoring well	3-20
3-5a	VOC Sampling/Preservation Flow Chart	3-24
3-5b	VOC Sampling/Preservation Flow Chart	3-25
3-6	Trench and Drain LNAPL Recovery System	3-37
4-1	Dual-Phase Extraction Well	4-3
4-2	Two-Phase Extraction Well	4-4
4-3	Process Flow Diagram of TPE Pilot Study Equipment	4-5
4-4	Piezometric Surface Under Application of MPE	4-10
4-5	Moisture Profiles at LCAAP	4-11
4-6	Transient Vacuum Propagation	4-14
4-7	Example Field Data Collection Sheet	4-15
4-8	Example Graph (Liquid Recovery) MA Industrial Site	4-21
4-9	Example Graph (Vacuum Influence Data) Squibb Mfg. Site, PR	4-22
4-10	Example Graph (Vacuum Influence Data) LCAAP	4-23
4-11	Example Graph: Groundwater Depression During Bioslurping Pilot Test Squibb Mfg. Site, PR	4-24
4-12	Example Graph: LCAAP Area 18 Shallow Well Pilot Test Groundwater Depression	4-25

LIST OF FIGURES (Continued)

	<u>Subject</u>	<u>Page</u>
4-13	Example Graph: Fuel Recovery versus Time throughout the Bioslurper Pilot Test Performed by AFCEE at Johnston Atoll	4-30
5-1	Piping and Instrumentation Diagram of Two-Phase Extraction System	5-2
5-2	Piping and Instrumentation Diagram of a Dual-Phase Extraction System	5-3
5-3	Example vacuum distribution curves using the pseudo steady-state solution to the 1-D flow equation	5-10
5-4	Example drawdown curves using the Cooper and Jacob approximation to the Well Equation	5-11
5-5	Example of a changing capillary fringe during MPE as described by the superposition of vacuum distribution and drawdowns	5-12
5-6	LNAPL Recovery versus Time for Various Drawdowns and for Vacuum-Enhanced Recovery with Drawdown	5-14
5-7	Predicted time to 0.3 meter (1-foot) LNAPL remediation vs. applied vacuum head for various LNAPL and soil types	5-15
5-8	Predicted long-term average flow rates from a single well at various applied vacuums and a drawdown of 1 meter (3 feet)	5-18
5-9	Multi-phase Extraction Well Detail	5-29
5-10	Typical Two-Phase Extraction System Piping Manifold	5-42
5-11	a) Typical Liquid Ring Pump b) Typical Rotary Vane Pump c) Typical Ejector d) Typical Rotary Piston Pump e) Typical Rotary Lobe Blower f) Typical Regenerative Blower	5-50
5-12	Comparison of Air Flow vs. Vacuum for Various Types of Vacuum Pumps	5-51
5-13	Optimal MPE Equipment for Varying Hydraulic Conductivities	5-52
8-1	Closure Data Evaluation Decision Matrix	8-2
